13. EIA Petroleum Status (Protocol G)

[NO DATA — EIA WPSR summary PDF not accessible within temporal boundary. Mark as supplementary — crude oil inventories are secondary to DXY IP mapping.]

14. Volatility Trigger Summary

#	Trigger	Type	Status	Effect	Execution Play
1	US-Iran Strait of Hormuz Tension	Geopolitical	ACTIVE	DXY bid on safe-haven flows; risk-on mood limiting upside	Escalation: DXY +0.30-0.50 to 98.50-99.00 | De-escalation: DXY drops to 97.63
2	Red Folder CPI (Wed Apr 22, 08:30 ET)	Macro	PENDING	If CPI above forecast: DXY surges. If below: DXY drops.	Pre-event lock 08:25-08:45 ET. Trade after 08:45 ET.
3	Red Folder Retail Sales (Tue Apr 21, 08:30 ET)	Macro	PENDING	First Red Folder of the week — sets directional impulse	Pre-event lock 08:25-08:45 ET.

15. Breakout Risk Alerts

No zones with ZFP > 50% identified. Highest ZFP is Mid-Range Support at 30%.

BREAKOUT SWEET SPOT (25–45% ZFP): Mid-Range Support (98.00–98.12) at ZFP 30% — if this zone faces increasing momentum from CPI or Retail Sales, it becomes a high-probability breakout zone.

17. Macro Shape Chain Map (Engine 2)

Current Shape	SS (Swing Scalps)
Anchor Zone	97.63-98.41
Confidence	HIGH
Primary Chain	SS → BS → R → WL (52%)
Alternative Chain	SS → WLS → BS (35%)
Branch Point	98.29-98.41 — If Equilibrium Zone HOLDS (ZFP remains < 30% with no macro catalyst breach)

Chain Extension Audit Trail

Step	Current	ZFP	Prediction	Confidence	Trigger
1	SS	20%	BS (Downside)	HIGH	Equilibrium Zone failure at 98.29 — breakout below SS floor
2	BS (Downside)	12%	R (Recovery)	MODERATE-HIGH	Price reaches Key Support Band (Hard Wall, ZFP 12%)
3	R	30%	WL (Whiplash)	MODERATE	Recovery reaches Mid-Range Support turned resistance

Rationale:

Step 1: ZFP 20% for Equilibrium is low but the macro catalyst (US-Iran + Red Folder events) can force a directional break. Bearish 4H trend + large EUR/USD option expiries at 1.1750 (€2.6B) support downside DXY move.

Step 2: BoM 0X Demand zone + Liquidity Sweep Target + multiple prior swing lows = high-probability rejection zone. But after initial bounce, expect Recovery (temporary) not full reversal.

Step 3: Zone at ZFP 30% provides friction but not a Hard Wall. Whiplash rejection back toward support likely.

Day-by-Day Session Map

Mon Apr 20 | Shape: SS | Confidence: HIGH

Timing Validation:

1. Option Expiry: EUR/USD 1.1750 (€2.6B) creates pinning near current spot — supports SS
2. Economic Calendar: No Red Folder events — no volatility catalyst for BS
3. Session Flow: Weekend gap down in EUR/USD (DXY gap up) but option cage at 1.1750 limits further move
4. Volatility Trigger: None active
5. Pre-week Positioning: Price at 98.10 between Key Support (97.63) and Equilibrium (98.29) — SS structure

Session	Prediction
Asian	SS — Range 97.95-98.20. Low volume, no catalysts.
London	SS — EUR/USD option cage at 1.1750 pins DXY near 98.10. 200-H MA at 1.1740 keeps EUR/USD sticky.
NY Pre-Cut	SS — Option cage active. EUR/USD 1.1750 (€2.6B) + GBP/USD 1.3500 (£1.0B) pin price.
NY Spring Release	If option cage holds: SS continues. If cage breaks: mild directional move toward 97.90 or 98.30.
NY Post-Cut	SS — Limited directional resolution. US-Iran headlines are the wildcard.

Trade: SS range bounce at floor zone

Direction	LONG DXY
Entries	97.85 / 97.75 / 97.68
SL / TP	97.58 / 98.25
Net RRR	2.5x
4H Context	4H BoM Demand zone at 97.63-97.94 confirms entry

Tue Apr 21 | Shape: SS → BS (Downside potential) | Confidence: MODERATE-HIGH

Timing Validation:

1. Option Expiry: EUR/USD 1.1675 (€1.8B) + 1.1800 (€1.8B) — large expiries create tension, Spring Release could trigger BS
2. Economic Calendar: RED FOLDER — Retail Sales (MoM) Mar — volatility catalyst for BS
3. Session Flow: SS from Monday may resolve directionally at 10:01 NY Spring Release
4. Volatility Trigger: Red Folder Retail Sales at 08:30 ET — catalyst for BS
5. Pre-week Positioning: If Monday SS held, tension builds for Tuesday resolution

Session	Prediction
Asian	SS — Continuation of Monday range. 97.90-98.25.
London	SS → building tension — large EUR/USD expiries at 1.1675 (€1.8B) and 1.1800 (€1.8B) create magnetic wells.
NY Pre-Cut	SS with increasing tension — Red Folder Retail Sales at 08:30 ET + option expiry at 10:01 NY.
NY Spring Release	DECISIVE — If Retail Sales surprises and option cage breaks: BS downside toward 97.63-97.97 support. If data inline: SS continues.
NY Post-Cut	If BS triggered: directional move toward Key Support Band 97.63-97.97. If SS continues: range 97.90-98.25.

Trade: BS downside from Equilibrium zone failure

Direction	SHORT DXY
Entries	98.25 / 98.15 / 98.05
SL / TP	98.45 / 97.70
Net RRR	2.7x

4H Context	Entry at MoM Supply zone edge, SL above 4H supply

Wed Apr 22 | Shape: BS (Downside) / R (Recovery) | Confidence: MODERATE

Timing Validation:

1. Option Expiry: [NO DATA — option expiry not yet published for Wed as of temporal boundary]
2. Economic Calendar: RED FOLDER — CPI (MoM) Apr — major volatility catalyst
3. Session Flow: If Tue BS continues, Wed extends. If Tue SS, CPI triggers new direction.
4. Volatility Trigger: CPI release — if above expectations, DXY spikes up (reversal risk)
5. Pre-week Positioning: CPI is the highest-impact event of the week — can override all structural analysis

Session	Prediction
Asian	If BS continuing: SS consolidation of the move. If SS: range 97.80-98.15.
London	Pre-CPI positioning — dealers adjusting hedges ahead of 08:30 ET release.
NY Pre-Cut	RED FOLDER CPI at 08:30 ET — Pre-event lock 08:25-08:45 ET. No new entries.
NY Spring Release	CPI resolution — if hot: DXY surges toward 98.50-99.00 (R → WL scenario). If cool: DXY drops toward 97.63 support (BS continues).
NY Post-Cut	Directional resolution — CPI determines if BS continues or reverses.

Trade: R/BS continuation — CPI-dependent

Direction	CONTINGENT — If CPI cool: SHORT DXY. If CPI hot: LONG DXY.
Entries	97.95 / 97.80 / 97.68
SL / TP	97.55 / 98.25
Net RRR	3.0x
4H Context	Entry at BoM Demand zone, SL below Liquidity Sweep Target

Thu Apr 23 | Shape: R (Recovery) / SS | Confidence: MODERATE

Timing Validation:

1. Option Expiry: [NO DATA — not yet published]
2. Economic Calendar: RED FOLDER — Initial Jobless Claims + S&P; Global PMI — moderate catalyst
3. Session Flow: After CPI volatility, expect consolidation/recovery. Post-pierce consolidation rule applies.
4. Volatility Trigger: Jobless Claims deviation can trigger small BS, PMI can add direction.
5. Pre-week Positioning: Recovery day likely after 2 directional days (Tue/Wed)

Session	Prediction
Asian	R — Consolidation. If CPI caused large move, Asian session absorbs.
London	R → SS — Price stabilizes at mid-range IP zone.
NY Pre-Cut	Jobless Claims at 08:30 ET — moderate impact. PMI at 09:45 ET.
NY Spring Release	Mild directional resolution — likely SS continuation or small R.
NY Post-Cut	R → SS — Week-end positioning begins. Institutional flow slows.

Trade: R/SS range trade at mid-range support

Direction	LONG DXY (if at support) / SHORT (if at resistance)
Entries	97.90 / 97.80 / 97.70
SL / TP	97.55 / 98.25
Net RRR	2.7x

4H Context	Range trade between Key Support and Equilibrium

Fri Apr 24 | Shape: SS / WL | Confidence: MODERATE

Timing Validation:

1. Option Expiry: [NO DATA — not yet published]. Friday expiries are most impactful for weekly pinning.
2. Economic Calendar: RED FOLDER — New Home Sales — moderate impact
3. Session Flow: Friday typically sees position squaring. SS or WL at week-end.
4. Volatility Trigger: New Home Sales surprise could trigger WL.
5. Pre-week Positioning: Week-end positioning dominates. Low conviction directional trades.

Session	Prediction
Asian	SS — Low volume. Weekend positioning.
London	SS → WL if option expiries create tension.
NY Pre-Cut	SS — Friday option cage (if large expiries exist) pins price.
NY Spring Release	WL — Final resolution of the week. If options cage was suppressing, Spring Release triggers WL.
NY Post-Cut	SS — Weekend liquidity drain. Reduce position sizes.

Trade: SS range trade / WL at key level

Direction	CONTINGENT — React to Friday option data when available.

Trade Direction Validation Protocol

Check	Assessment	Favors
Check1 4H Trend	Bearish (lower highs since 100.16)	Short
Check2 Bom Alignment	Nearest opposing BoM is BoM Demand at 97.63-97.94 BELOW → Favors: Short toward Demand	Short
Check3 Lsz Direction	Nearest LSZ is 97.63-97.68 BELOW → Initial sweep direction: DOWN	Short
Check4 Zone Failure	Equilibrium Zone (98.29) — support/resistance zone. If fails DOWN: downside BS	Short (if zone fails)
Check5 Macro Shape	SS → Downside BS → R → WL — primary chain direction is DOWN	Short

CONSENSUS: SHORT (5/5 checks agree)
