7. DXY Macro Shape Chain Map (Engine 2)

4H Storyline Bias: CONSOLIDATION (neutral-bearish tilt) — Lower highs 99.52>99.41>99.25 suggest bearish tilt, but 98.90 double-tested support holds. Directional breakout requires PCE catalyst on Thursday.

Step 1: Current Shape Identification

Current 4H Shape	SS (Swing Scalps) — Consolidating within 98.90-99.52 range. 5+ sessions of ranging.
Prior Shape	R (Recovery) — Bounced from 98.90 double bottom toward 99.52 ceiling.
Shape Context	R completing at 99.52 ceiling. Failed 3rd test. SS shaping up as pre-PCE consolidation.
ZFP at 99.52	15% — Very low failure probability. Triple-tested ceiling + BoM supply = strong resistance.
Pressure Reading	Upper wicks on 4H candles = selling pressure at ceiling. Lower highs forming. Buyers losing momentum above 99.30.

Step 2: ZFP-Conditioned Transition Probability

From Shape	ZFP	Transition	Probability	Reasoning
SS at 98.90-99.52	15% (LOW)	SS → SS	80%	No catalyst until Thu. Range-bound continuation most likely.
SS at 98.90-99.52	15% (LOW)	SS → WL	10%	Whiplash requires catalyst. None until PCE.
SS at 98.90-99.52	15% (LOW)	SS → BS	10%	Breakout requires new catalyst. Low probability pre-PCE.

> **ZFP-Conditioned Rule:** SS with ZFP <20% at ceiling → SS continuation (NOT BS). Breakout requires catalyst. This is the most likely path until Thursday PCE.

Step 3: Chain Extension with Audit Trail

Step	Day	Predicted Shape	Shape Context	Key Transition Time
1	Mon May 25	SS	Option cage + no catalyst. Range 98.92-99.11.	All session
2	Tue May 26	SS	Compressed 98.90-99.25. Recovery from Mon low.	London 07:00-09:00
3	Wed May 27	SS/WL	EUR options mega-day + Australia CPI. Tension building.	NY 12:00+
4	Thu May 28	BS directional	RED FOLDER: PCE+GDP+Durable Goods. PRIMARY CATALYST.	NY 12:30+ (after 30-min deferral)
5	Fri May 29	R/SS	PCE aftermath + CME option expiry. Resolution.	All session

Weekly Shape Chain Visualization:
Mon: SS(range) → Tue: SS(compressed) → Wed: SS/WL(tension) → Thu: BS(PCE catalyst) → Fri: R/SS(resolution)

Consolidation Phase: MID-TO-LATE. Range 98.90-99.52 for 5+ sessions. Lower highs forming (99.52>99.41>99.25). ZFP on ceiling falling (25%>22%>20%). Breakout risk rising. Wednesday/Thursday = primary directional catalyst window.

Breakout Watch: Thursday PCE is the catalyst. Hot PCE = BS through 99.52 toward 100.00. Cool PCE = DWL through 98.90 toward 98.50.

Trading Speed Adjustment: Add +1 day to expected timing. What looks like Wed BS may not resolve until Thu. The PCE on Thu is the primary directional catalyst.

8. DXY Volatility Trigger Summary

8B. DXY Trade Setup Architecture (Engine 3 — Full-Spectrum)

BoM/MoM Enforcement: All entries prioritized at BoM zones. MoM zones = TP targets only unless exception criteria met. Virgin MoM = DEATH ZONE.
1-2-3 Retest Timing: Virgin zones = NO ENTRY unless BoM. 1-2 retests = scalp only. 3+ = swing entry. "Wait for the bounce" rule active.
